Dynamic Product Building

RegTech Solutions

Business Agility to Drive Productivity & Efficiency

Stop Revenue Leakage & Increase Profitability

Concurrent Technological Advancements Deployment

Automated Processes & Robotics, Hence Time & Money Savings with High Accuracy

Lower Total Cost of Ownership (TCO) & Time to Market

# When the New Day Bedazzled

Islamic finance industry started in the 7th century when the early Muslim community started to trade and exchange on an interest-free basis. As the Islamic country expanded, the volume and coverage of such trade expanded to a large sway of the world's population. The interest-free concept dragged on until the modern-day, although the banking concept has been around since the 15th century, Muslims were using banking services only for transfers and basic exchange services, and Islamic finance was flowing through traditional channels like Mosques, Clerics and Trustees services that were mostly local.

The modern Islamic finance industry is young and evolving rapidly. It continues to expand and serve a growing population of Muslims as well as conventional, non-Muslim investors.

The industry developed into an alternative model of financial intermediation that led to the creation of several private Islamic financial institutions. The International Monetary Fund and the World Bank also recognised these products as an alternative means of financial intermediation. During the 1990s, while growth in the Islamic banking industry continued, attention was also given to the development of non-bank financial institutions such as insurance companies and investment funds.

According to Global Islamic Finance Markets Report 2019, the industry's total worth, in conjunction with key industry stakeholder organizations across its three main sectors (banking, capital markets, and TAKAFUL), was estimated to be USD 2.05 trillion in 2017, marking an 8.3% growth in assets in USD terms, and reversing the preceding two years of assets' growth stagnation (2017: USD 1.89 trillion vs. 2016: USD 1.88 trillion).

Islamic banking in contrast to Conventional is an interest-free investment house rather than an interest-base money lending institute, where this would lead to sharing profit and risk. In this modern-day, such an ambition causes challenges in which some are listed below:

- There are major Islamic finance Shari'a standards such as AAIOFI and IFSB, as well as various intellectuals that look at the Islamic financing differently, still, each country, region and even bank has its own shari'a board to set rules and regulations.
- Having a whole interconnected Islamic finance ecosystem that covers all lines of business.
- Islamic Finance is based on a trade contract, where contract control is a major undertaking to any Islamic bank.
- The contract's precise paperwork is a must and handling them would be a difficult issue.
- There is no single methodology used for product development in Islamic finance.
- Shari'a regulations obligate the bank to have constant interactions with the customer, which in return makes it difficult to keep up, in other words, maintaining focus on the customer is a real challenge.

- The required interactions and supervisions make it difficult to cover a large customer base.
- Preserving clarity of the whole financing process to avoid misconduct or mishandling.
- Shari'a controls and supervisory are not easy to operate.
- Having a comprehensive and effective profit distribution tools.

# The Preeminent is Born

In response to the market needs and challenges, ICSFS started its full-fledged ICS BANKS ISLAMIC banking software from the mid-90s, based on Shari'a law, the system started from scratch and with the aim of covering full Islamic finance ecosystem cycle. ICS BANKS ISLAMIC software suite is designed to cover all Islamic banking requirements and cater to each bank's shari'a regulations.

After decades of evolution and innovation, ICS BANKS ISLAMIC has become a technologically frontier software, where agility is one of its core virtues. ICS BANKS ISLAMIC provides the bank with:

- Full coverage of Islamic finance and banking ecosystem.
- Persistent technological advancement utilising the latest technologies to achieve lower total cost of ownership (TCO).
- Strong, flexible, fast and reliable industry-approved profit distribution engine.
- Fully shari'a-compliant, covering various intellectual Islamic views in different regions and continents.
- Wide range of parameters to build Islamic products.
- Strong Business Process Management (BPM) and Document Management System (DMS) in its DNA.
- Customer engagement and customer social engagement through touchpoints.
- Cloud available to reduce infrastructure costs.
- Vast touchpoints coverage with omnichannel in essence, to expand the bank's businesses, regardless of geographical limitations.
- Robotics to automate, speed up internal processes and to be used in customer service.
- Boosting analytical powers and risk reduction through Artificial intelligence (AI).
- Covering required clarity and strong reporting and analytical tools.
- Blockchain technology and smart contracts to enhance productivity, accuracy and lower costs.
- Regtech solutions.
- Open APIs to connect to the outside world and support fintech activities.

## The Precious is Here!
